2. The NPIC has a	MEMOD A KIN	IM POD. Prometica Divertor NDTC	
1. It is requested that the following employees of the be cleared for access to material which is classified under the T, KH and O systems. 2. The NFIC has a to design, fabricate and test two contact printers. One printer is for the U.S. Army Engineers GDEADA, the other is for NFIC. Under the original design for the Center's printer, it would have been able to operate in an automatic mode by sensing coded marks on the negative. This feature was cancelled by us us the present policy of the Center does not permit the marking of the negative, after receipt at the Center, because of the possibility of damage to the film. 3. It is generally agreed that definite advantages would result if a safe method of marking film were available. These advantages would be of value in viewing equipment as well as in printing equipment. It is therefore intended to place a contract with the to make a thorough study of all possible methods of safely applying machine- and human-readable marks on protographic film and of the methods of reading these marks. To make a thorough and intelligent study of film marking, it is necessary that a few key personnel have knowledge of the formats, dimensions, density ranges, etc., of the T, KH and O materials. Will be very closely connected with the proposed contract. A knowledge of the format dimensions, etc.	menunan u	UM POR: Executive Director, NPIC	
2. The NPIC has a to design, fabricate and test two contact printers. One printer is for the U.S. Army Engineers CDMADA, the other is for NPIC. Under the original design for the Center's printer; it would have been able to operate in an automatic made by sensing coded marks on the negative. This feature was cancelled by us us the present policy of the Center does not purmit the marking of the negative, after receipt at the Center, because of the possibility of demage to the film. 3. It is generally agreed that definite advantages would result if a safe method of marking film were available. These advantages would be of value in viewing equipment as well as in princing equipment.
